SUMMARY

I'm a junior computer science student who's passionate about the web industry especially, with front-end development track, and passionate about creating and developing web applications that
provide quality user experience through responsive web design, also I'm a passionate competitive programmer who enjoys solving hard problems and participating in competitions.

PROJECT EXPERIENCE

Nov 2021 - Jan 2022
Water Billing Management System
This project is the main part of the System Design course. The theme of the project is to create a complete Water Billing System. A Water Bill Management System is a Desktop Application through which people can pay their bills and know their Debts. And the application calculates consumption and debt and the amount required from the user and adds them to a database
